

AVI 101 - Human Body Proportions

name: _____

TASK:

PART 1

You will need a pencil, sketchbook (or paper), ruler and a partner.

Using your head as the basic unit of measurement, figure out how many heads fit into the following distances on your body. Use the ruler to figure out the length of space (not the cm distance)

Fill in the following chart:

head = basic unit of measurement.	
How many heads fit into the distance between:	
head to foot	
shoulder to shoulder	
elbow to finger tip	
head to waist	
waist to knee	
knee to foot	
How many:	
hands in a head	
hands in a foot	

PART 2

Draw a figure in your sketchbook (or on cartridge paper) based on the proportions you have just measured.
